

It's a fact: *An ongoing countdown of things you may not know about NEWESD 101, the region's schools, people, history and geography.*

Fact: The area behind the NEWESD 101 office building was once the site of the world's tallest self-supporting radio tower. In 1949, half of the 800-foot KHQ structure broke off in a storm packing 85 mph winds. The tower was later replaced by a large new guyed tower that remained until 1993.

Today, a portion of the former transmitter site is used for NEWESD 101 parking.
